

ISO 20022 testing simplified

Unifits Customer Onboarding

Onboarding made easy for your corporate clients

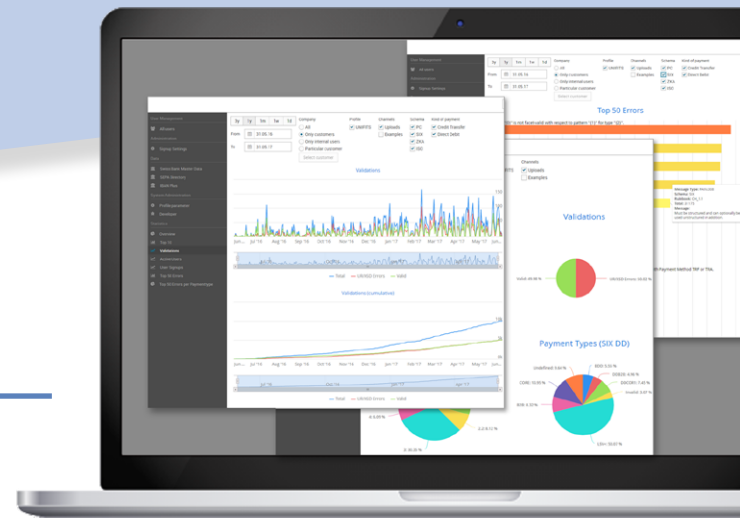

Onboarding made easy – how to prepare your corporate clients for your eBanking channels

The onboarding platform is far more than a simple validation portal for submitted payment messages. It ensures that payment orders are fully compliant with required schemas and can be processed smoothly – a key foundation for efficient digital banking operations.

With Unifits Customer Onboarding, you provide your corporate clients with an intuitive solution to independently test and optimize their payment processes. Especially in the context of ISO 20022 migration, clients benefit from simulation capabilities for status and account reports, enabling them to validate their ERP systems without relying on bank support.

The result: faster implementations, fewer errors, and reduced internal workload. At the same time, you enhance client satisfaction through a modern and transparent onboarding experience.

Choose a future-ready solution and turn your eBanking onboarding into a true competitive advantage.

At a glance

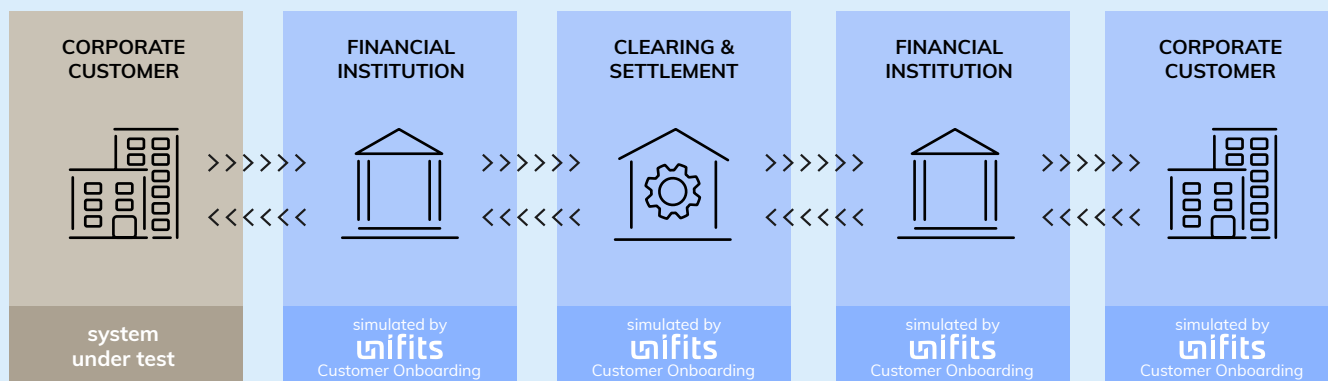

- ✓ **Significantly reduced effort** for the bank thanks to a self-service-oriented testing portal
- ✓ All relevant tests are **easily performed by corporate clients themselves**, with test results **available immediately**
- ✓ **Smooth implementation** and reduced project-related and operational risks through seamless integration of our software
- ✓ **Increased transparency** for both client and bank thanks to comprehensive testing statistics
- ✓ **Satisfied clients** and added value for everyone

WITH THE TRUST OF THE INDUSTRY

Customer Onboarding at an entirely new level

The application validates all types of message formats used for initiating payments. It generates messages for bank-to-customer reporting and simulates incoming payments by accurately replicating the bank's relevant systems. Self-registration and user-friendly design ensure easy operation without the need for training. A high level of reliability and security is guaranteed through external penetration testing, while comprehensive statistics provide the transparency you need regarding your corporate clients' testing progress.

Our Unifits Customer Onboarding platform enables every software partner and banking client affected by the harmonization of Swiss payments to perform testing independently and with full autonomy.

Beyond significantly increasing our onboarding efficiency, the solution delivers substantial added value to our clients through a 24/7 self-service environment available seven days a week. This reduces the need for manual support on both sides while simultaneously improving the overall quality of payment processing.

What makes working with Unifits especially valuable is their commitment to topics like ISO 20022 and quality assurance. Thanks to reliable technology and straightforward communication, Unifits is a trusted partner for us.
