

ISO 2022 testing simplified

# Unifits Test Engine automate end-to-end testing within your bank

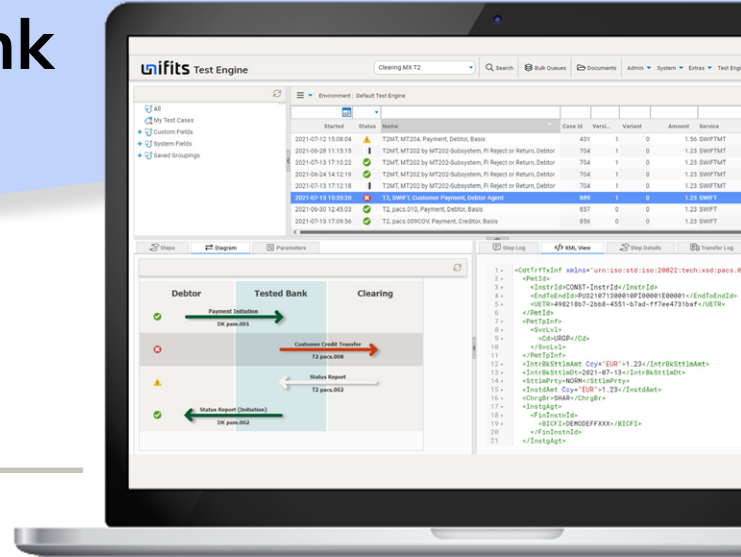

**Master complexity.  
Accelerate transformation.**

Today's payments landscape is defined by rising complexity, increasing regulatory pressure, and constant time constraints. The Unifits Test Engine provides the transparency and control needed to manage testing processes efficiently and reliably.

As a specialized solution with built-in industry expertise, it automates testing across all relevant clearing and settlement systems. By simulating real-world market participants, it enables end-to-end, production-like testing of all payment processes.

The result: significantly reduced operational risk, measurable efficiency gains, and a faster time to market. Complex testing initiatives become predictable, resources are used with precision, and regulatory requirements are met with confidence.

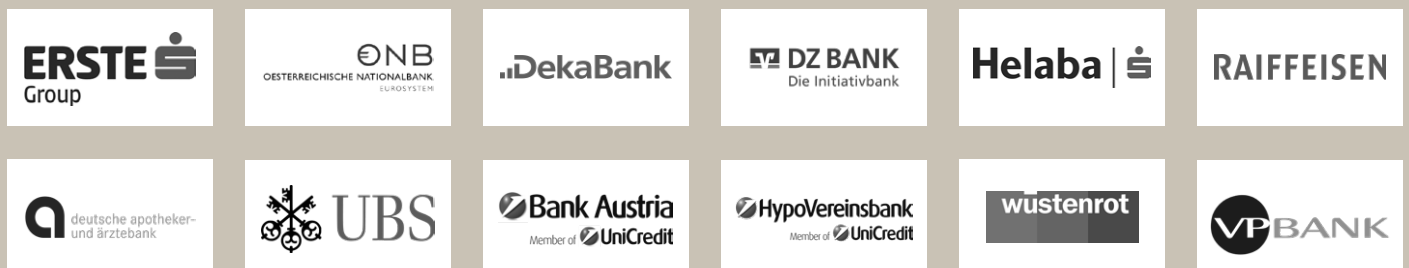

The Unifits Test Engine lays the foundation for stable operations, informed decision-making, and sustainable competitive advantage in a rapidly evolving payments ecosystem.

## At a glance

- ✅ **Massive acceleration** of testing processes and **reduction** in test cycle times
- ✅ Significant reduction in required testing **personnel resources**
- ✅ **Rapid deployment** enabled by embedded domain expertise, minimal interfaces, and the use of standardized middleware
- ✅ **Substantial improvement** in test quality with minimized testing effort
- ✅ **Reduction** of project-related and operational risks

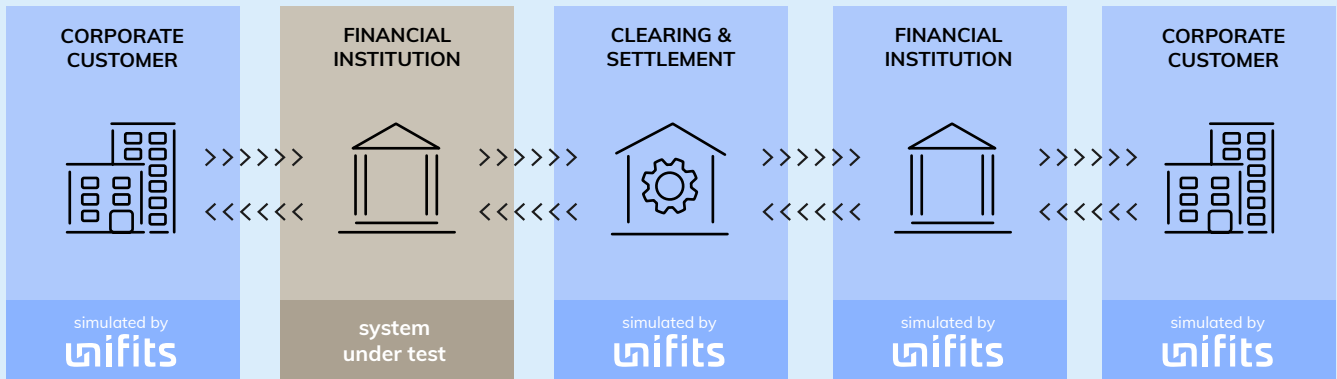

TRUSTED BY THE INDUSTRY

## FUNCTIONALITY

# Automated end-to-end transaction testing

The Unifits Test Engine is a unique solution with deep banking and payments expertise built in from the ground up. Integrated simulators for payment initiation, clearing, and settlement systems enable your bank to create a test environment that accurately reflects real production conditions.

## COMPATIBILITY

### Supported payment schemes

The Unifits Test Engine is designed to support the guidelines of a wide range of clearing and settlement schemes worldwide. It covers both bilateral clearing via SWIFT and centralized clearing for instant, high value, and bulk payment systems.

At the same time, Unifits continuously expands its portfolio to include new schemes and standards. This means that regardless of which clearing and settlement scheme your institution must comply with, or which payment initiation and reporting standards you provide to your corporate clients, the platform enables fast, comprehensive, and continuous testing of all payment types and processes through fully integrated simulation.

Thanks to the Unifits Test Engine, the availability of highly skilled testing resources is no longer a major concern. The quality of our payment flows is ensured automatically, regardless of whether we are processing bulk payments or instant payments.

Because the Unifits Test Engine initiates end to end payment flows across multiple customer channels and simulates every clearing and settlement system connected to our infrastructure, we have been able to significantly reduce both the effort and the time required for regression testing.

And beyond the technology itself, working with Unifits is always a pleasure. Their outstanding expertise and support continue are inspiring.

## START NOW

### Let's start to simplify your transaction testing today!

Benefit from repeatable, automated and reliable execution of hundreds of test cases within a few days of implementation.
