

UNIFITS

SOLUTIONS FOR ISO 20022

**Contributing to the global
modernization of payments**

www.unifits.com

Our Solutions

UNIFITS Software solutions are designed to streamline support processes, eliminate manual intervention and unburden key resources from routine testing tasks.

We strive for excellence in everything we do. Our solutions are characterized by 'State of the Art' technology, a remarkable functional range and a high degree of flexibility. All our products are available either as a service or on premise.

Solutions for your payment projects and to maintain ongoing quality assurance

XML CENTER – your 'Swiss army knife' for ISO 20022

With the UNIFITS XML Center you perform all tasks around ISO 20022 XML messages in one application. With the user-friendly interface, you carry out complicated tasks such as the creation and editing of even very large XML files simply and securely. The XML Center supports ISO 20022 related projects from a major migration to ongoing maintenance and customer related support.

VALIDATION PORTAL – best in class customer onboarding

The Validation Portal simulates the bank's behaviour and enables effortless self-service and end-to-end testing for your corporate customers. We have received numerous testimonials offering confirmation that this is the most efficient solution to support customer onboarding to ISO 20022.

TEST ENGINE – establish independent, continuous automated testing

The Test Engine simulates the behaviour of all roles within a payment end-to-end process thus enabling independent, continuous automated testing of the overall payments cycle. With this unique solution, you meet the needs raised by the rapidly evolving technology and complexity in processing payments and you significantly reduce testing resources, effort and timelines while increasing the quality and reliability of your payment processing.

Solutions for your production payment environment

XML REPAIR – the audit-proof repair for productive XML payment messages

The XML Repair is a highly-specialized editor for ISO 20022 XML. It allows the simple correction of XML messages in customer-to-bank or bank-to-bank space. Since all changes to the underlying messages are recorded, it enables a completely revision-compliant repair process.

XML CONVERSION – another quick win for your project

Our XML Conversion solutions from and to XML are available for all ISO 20022 based messages and accessible as an integrated API or via a web service.

XML SEARCH – powerful transaction search and investigation

The XML Search and Archive is an archive and investigation system for XML: an efficient and powerful investigation platform in combination with an audit proof, reliable repository for archiving all types of XML messages, scalable up to several petabytes.

Our Consulting Services

Our consulting programs will support you with the fulfilment of various tasks in relation to the migration and implementation of ISO 20022 based systems and processes.

Our reputation is built on a dedicated focus on and passion for the global ISO 20022 standard. Our proven track record and direct leadership experience in multiple migration projects provides a solid foundation and the expertise necessary to design programs that are both cost effective and superior in quality.

Services to kick-off and speed up your project

LESSONS LEARNED WORKSHOP – benefit from 10 years ISO 20022 experience

In our lessons learned workshop we present you with the typical pitfalls of an ISO 20022 migration based on our 10-year track record supporting the ISO 20022 migration in Europe. We'll cover topics such as the tremendous magnitude and often under-estimated overhead of ISO 20022, the complexity caused by numerous tags and the seeming simple task of verifying an XML message.

MODERNIZATION QUICK CHECK – transparency for your project from the outset

With our quick check, you will receive transparency on ISO 20022 requirements and payment processes. Through interviews conducted with selected executives and your functional area subject matter experts, we evaluate customer-specific processes. Then we sum it all up in a customized presentation with initial assessments.

ISO 20022 TRAINING – customized education for your project team

Our ISO 20022 training is designed for employees of your day-to-day business units and for your product and sales support teams. This workshop provides participants with a basic understanding of ISO 20022 XML and XSD as well as ISO 20022 credit transfers, direct debits, R-transactions and account statements. After the training the participants are prepared to handle ISO 20022 as well as the current format.

Services to boost efficiency in your project and in maintaining further developments

RULEBOOK SERVICE – save considerable time

We analyse the changes of regularly published guideline versions for ISO 20022 based processes and formats and determine the impacts on your IT systems. Based on our pre-analysis we organize a joint workshop where we work out the required tasks and work packages for the necessary changes in your IT systems.

TESTING SERVICE – efficiency through a unique combination of expertise and tools

We perform the complete and efficient testing of ISO 20022 compliant IT systems. We begin with the planning and the preparation of the test cases right through to the execution and documentation of the results.

Our experienced and highly skilled personnel use our solutions for the automation of certain steps within the testing process to reach a high degree of efficiency and effectiveness.

UNIFITS – Solutions for ISO 20022

UNIFITS is a consulting and software company with expertise in designing ISO 20022 programs to meet the transformation requirements unique to each region.

Our team has a successful 10 year track record supporting the ISO 20022 migration in Europe. Our software products, such as the XML Centre and the Test Engine, have lead the way.

Get a head start and benefit from our solutions, services and experience.
