

ISO 2022 testing simplified

# Unifits Test Engine: automate end-to-end testing within your bank

## Testing ISO 2022 XML messages: turning complexity into simplicity

The Unifits Test Engine simulates test counterparts and enables the end-to-end testing of payment transaction flows for financial institutions. Simulating the behaviour of each role within payment clearing and settlement infrastructures, the highly-specialized and easy-to-use software solution enables independent, continuous automated testing of the overall payments cycle and ensures your interoperability with all the payment ecosystems you are connected with.

## At a glance

- ✓ Massive **acceleration** of the test execution
- ✓ Significant **reduction** of test resources
- ✓ Ready for **immediate use** (domain knowledge integrated, no scripting)
- ✓ Highly **improved test quality**
- ✓ **Reduced** operational risks

TRUSTED BY THE INDUSTRY | CUSTOMER EXAMPLES

## FUNCTIONALITY

# Automated end-to-end transaction testing

The Unifits Test Engine is the first solution of its kind with extensive industry-specific knowledge already embedded. Simulators for all types of payment clearing and settlement infrastructures thus turn your test environment into a mirror image of production and enables continuous testing 24/7/365.

## COMPATIBILITY

# Supported payment schemes

The Unifits Test Engine complies with the guidelines of a wide range of clearing schemes for a large variety of payment systems throughout the world, e.g. Real-Time payments, High Value payments, Mass & Retail payments.

Unifits is constantly introducing new schemes and enabling automated testing for all your different types of payment transactions. This means that no matter what schemes and guidelines you need to comply with for clearing and settlement, and no matter what standards you offer your corporate clients for payment initiation and reporting, the comprehensive simulation of all counterparties allows you to automate your payment transaction testing in no time at all.

Thanks to Unifits Test Engine, availability of our highly skilled test resources is a much smaller issue. Quality for our payment flows is assured automatically, regardless of whether they are related to batch- and instant-payments.

Since the Unifits Test Engine initiates end-to-end flows through different customer channels as well as simulates all the diverse clearing and settlement systems we are connected to, we have been able to significantly reduce effort and duration for regression testing.

Furthermore, it's always a joy to work with Unifits. Their outstanding expertise and support are inspiring!

## START NOW

# Let's start to simplify your transaction testing today!

Benefit from repeatable, automated and reliable execution of hundreds of test cases within a few days of implementation.
